**Helm CONNECT: Compliance**

Meet Documents

Ensure your crew always has the most up-to-date version of any important document by allowing you to control uploading, versioning, and access.

> Distribute key PDF documents and attachments from shore to the crew on your assets

> Use version control to ensure your crew can only access the most up-to-date documents

> Track when updated documents are received and acknowledged

> Maintain a searchable archive of historical documents

"

"We did everything on paper before getting introduced to Helm and TBS. Version control and getting late information was an ongoing problem. I'd only get information during crew change which for us happens every 20 days. That's paperwork 20 days late. Now, I no longer need to micro manage and I get the information I need in real time. Everyone on the boat knows what they need to do on a daily basis to ensure we stay compliant."

– Zane Brown
Safety and Compliance Manager,
Brown Water Marine
